Lab 1 Installing the required software and simple sample database

PART A SQLite

DB Browser for SQLite (DB4S)

General information

<https://sqlitebrowser.org>

Download

<https://sqlitebrowser.org/dl/>

DB Browser for SQLite (DB4S) is a high quality, visual, open source tool to create, design, and edit database files compatible with SQLite. DB4S is for users and developers who want to create, search, and edit databases. DB4S uses a familiar spreadsheet-like interface, and complicated SQL commands do not have to be learned. Controls and wizards are available for users to:

- Create and compact database files
- Create, define, modify and delete tables
- Create, define, and delete indexes
- Browse, edit, add, and delete records
- Search records
- Import and export records as text
- Import and export tables from/to CSV files
- Import and export databases from/to SQL dump files
- Issue SQL queries and inspect the results

This program is not a visual shell for the sqlite command line tool, and does not require familiarity with SQL commands. It is a tool to be used by both developers and end users, and must remain as simple to use as possible in order to achieve these goals.

Sample Database

Create a New Database called sample1.

Import Books1.csv

Identify the redundancy level and update efforts required to, for example, change a publisher's phone number. Use the Tab Browse Data to view and update data.
