

ASSIGNMENT 2 USE CASE

Please find below some suggestions on requirements for each use case. Your list of requirements can include all of these, some of these or add extra requirements not shown here.

USE CASE 1 AIRLINE BOOKING

Some key requirements for an online airline booking database:

Flight Information:

- Store detailed information about flights, including flight number, departure and arrival locations, aircraft type, and seat capacity.
- Maintain historical data on past flights for reporting and analysis.

Customer Information:

- Capture and store customer details, including names, contact information, and payment preferences.

Booking Records:

- Record details of each booking, linking customers to specific flights.

Payment Processing:

- Store payment details securely

USE CASE 2 MATERNITY HOSPITAL

Some key requirements for a maternity hospital in-patient database:

Patient Information:

- Capture and store comprehensive patient information, including personal details, allergies, and contact information.

Newborn Information:

- Record information about the newborn, including birth weight, length.

Medication and Treatment Records:

- Track medications administered to both the mother and newborn.

Consultant information:

- Record information about consultants.

Appointment Scheduling:

- Implement a scheduling system for visits.

Medical Imaging Information:

- Record medical imaging to store and retrieve ultrasound images and other diagnostic reports.

Billing and Insurance Information:

- Record billing information and integrate with insurance systems to facilitate billing processes.
