

Information Systems

MySQL for Windows

General instructions

<https://dev.mysql.com/doc/mysql-installation-excerpt/5.7/en/installing.html>

Downloading the installer

<https://dev.mysql.com/downloads/installer/>

Choosing the right file:

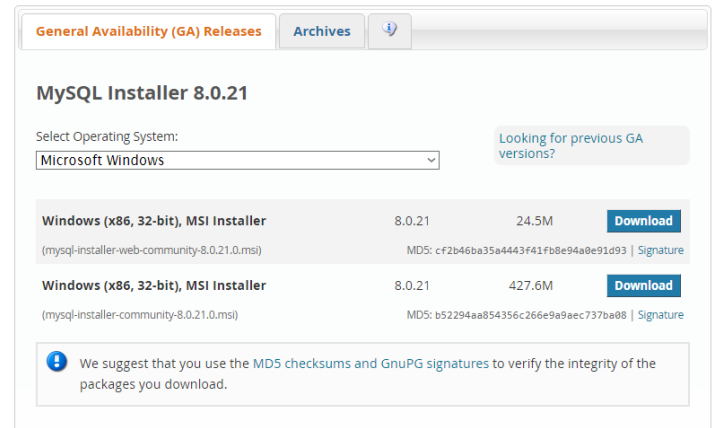

- If you have an online connection while running the MySQL Installer, choose the **mysql-installer-web-community** file.
- If you do NOT have an online connection while running the MySQL Installer, choose the **mysql-installer-community** file.

Note: MySQL Installer is 32 bit, but will install both 32 bit and 64 bit binaries.

Execute the installer and follow the instructions.

MySQL Community Downloads

MySQL Installer

When prompted select **InformationSystems** as your password.

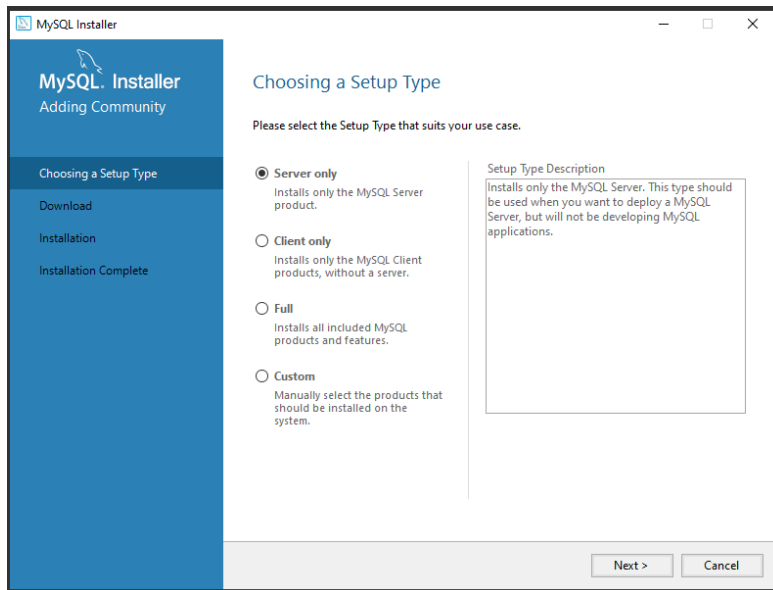

Video walk through

For a short walk though video see [here](#).

Installation Steps

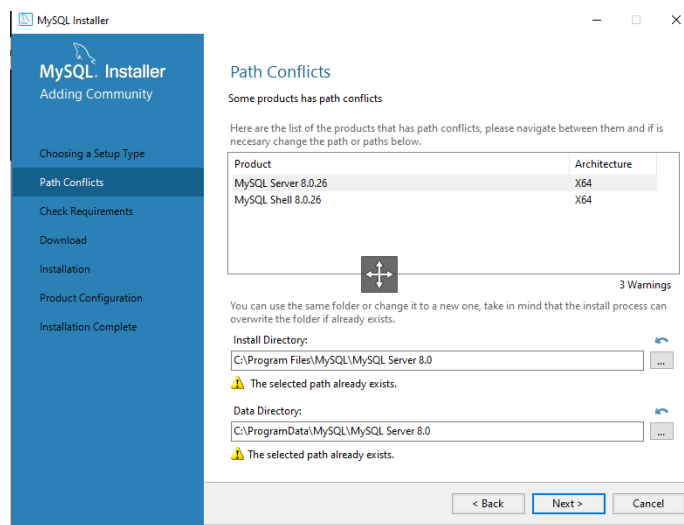

Some of these steps may be slightly different on your machine.

Choose the Full SetUp:

You may get Path conflicts if you had MySQL installed before.

If you get this warning you can ignore it and continue.

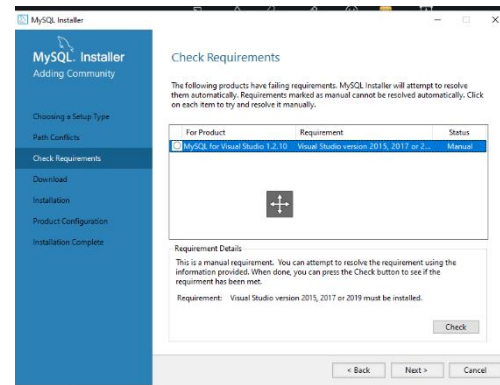

The next screen will deal with the requirements or other software that needs to be installed.

In the screenshot, we see a requirement with Status manual.

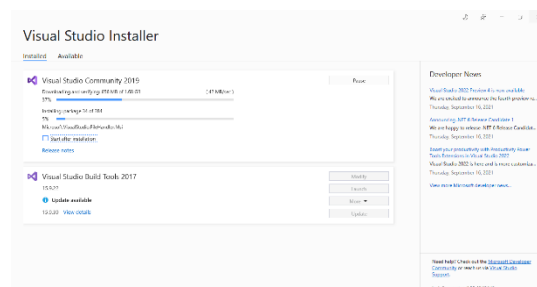

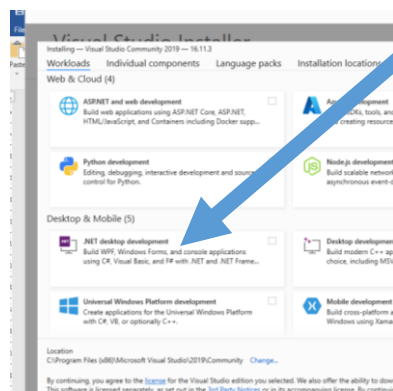

Any Status manual requirement needs the installation of software separately. In this case, we need to install Visual Studio.

Download Visual Studio from:

<https://visualstudio.microsoft.com/thank-you-downloading-visual-studio/?sku=Community&rel=16>

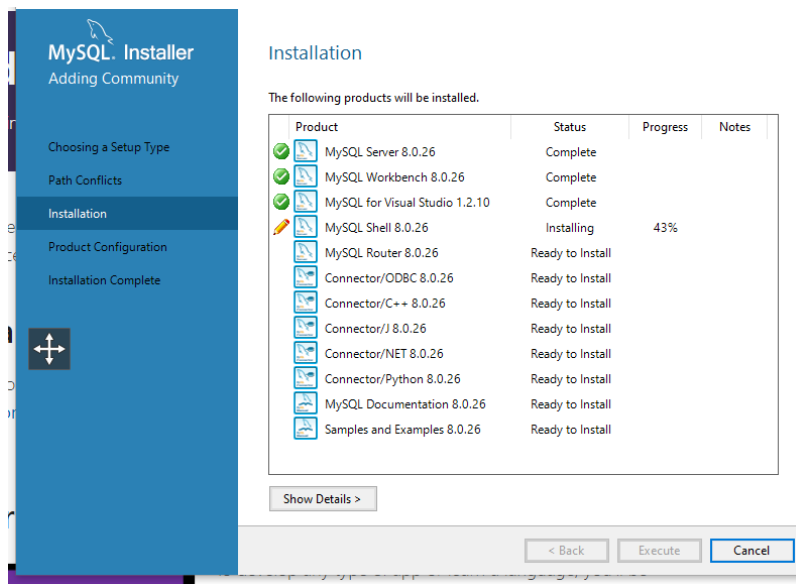

Select .NET desktop development

Once Visual Studio has been installed, the requirement will disappear. Click on check if it is still appearing on the list of requirements.

On the next screen you will download and install all the selected packages, if any of the downloads fail click on Try again as this is a normal occurrence.

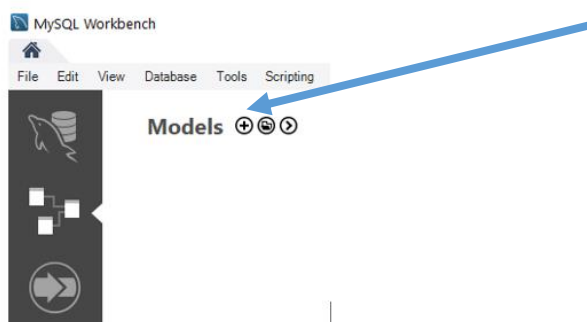

Once you have all the packages installed, you will be asked to configure the products.

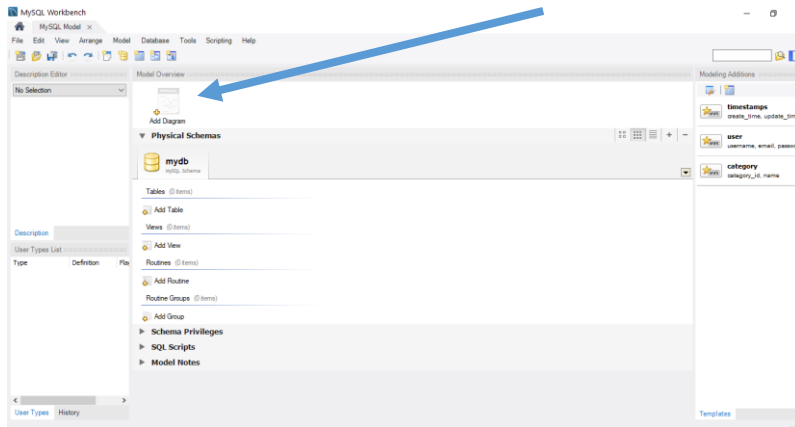

When prompted select **Information Systems** as your password.

Click on models on the left hand side panel and create a new model using the plus symbol.

Click Add diagram.

Now we are ready to create a new ER model for our database.
