

Lab 11

Information Systems

In this lab, you will be practicing and consolidating your SQL knowledge. You will complete the game SQL Island created by Technische Universität Kaiserslautern.

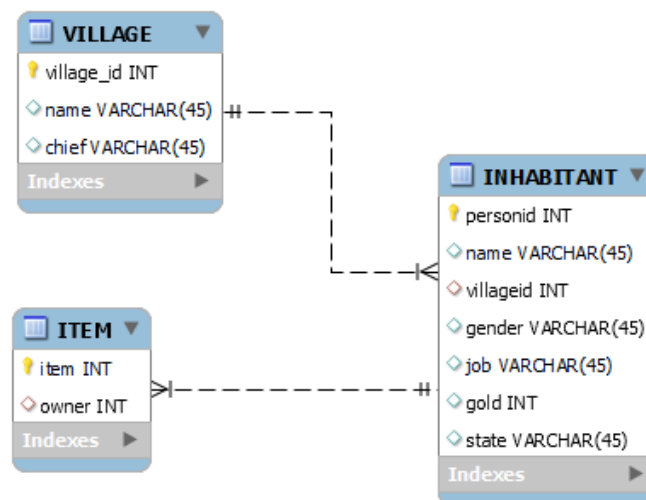

Storyline

You are travelling on a plane that crashes into an isolated island. After surviving the plane crash, you are stuck on SQL Island for the time being. By making progress in the game, you will find a way to escape from this island.

There are a number of villages in the island. People in the island live in one of the villages and have a name, a gender, a job, wealth in the shape of gold amounts and a state that will tell us if the person is friendly, evil or has been kidnapped. There are also a number of items in the island some of which belong to inhabitants whereas some others have no owner.

The structure of the database is as follows:

VILLAGE (villageid, name, chief)
INHABITANT (personid, name, villageid, gender, job, gold, state)
ITEM (item, owner)

Performing queries following the story line you will be able to find a way to leave SQL Island.

Sample queries

```
SELECT * FROM inhabitant where job = 'butcher';
```

```
SELECT * FROM inhabitant where job = 'butcher' AND gender='f';
```

```
SELECT * FROM inhabitant where job IS NULL
```

```
UPDATE item SET owner = 20 WHERE item = 'coffee cup'
```
